

RESEARCHER & DATA COORDINATOR

The Longitudinal Dataset You've Been Waiting For

NSC data merged with your district's student records ready to be surfaced as interactive dashboards or exportable CSV files.

Skip cleanup. Go straight to analysis.

Row-Level Exports

Don't just look at charts. Use the Researcher tool to export clean, student-level CSVs containing linked demographic, program, and outcome variables.

Custom Cohorts

Filter for "Low Income + Running Start + Hispanic Males" to track specific grant metrics or levy reporting requirements.

Data Privacy First

Role-based access ensures you get the granularity you need without exposing PII to unauthorized users. FERPA compliant by design.

THE CHALLENGE

National Student Clearinghouse data is powerful, but messy. It's disconnected from your student demographics, difficult to parse longitudinally, and requires massive cleanup before you can run a single regression analysis.

THE FOYOST SOLUTION

We handle the ETL (Extract, Transform, Load) so you don't have to. FOYOST ingests raw NSC files, matches them with local district demographics, cleans the anomalies, and structures the data for immediate statistical use.

Stop scrubbing data and start using it.

FOYOST gives researchers pre-calculated, disaggregated metrics across cohorts, programs, and demographics — covering everything from enrollment and persistence to transfer patterns, completion velocity, and equity gaps.

Let's look at your district's data. Schedule a 20-minute demo today. Scan the QR code or visit followyourstudent.org.
